

E2A TELEMETRY

ELECTROMAGNETIC INTERFERENCE WARNINGS

1. GENERAL

1.01 This section provides the electromagnetic interference (EMI) warnings for E2A telemetry equipment. It does not describe the equipment nor the exact warning to be placed on the equipment. It describes only the warning notice set forth by the Federal Communications Commission (FCC) regarding technical standards for computing equipment.

1.02 This section is being reissued to provide the warning notices of electromagnetic interference for E2A telemetry. Since this reissue is a general revision, no revision arrows have been used to denote significant changes. Equipment test lists are not affected.

2. WARNING NOTICES

2.01 There are two forms of warning notices—one for use *before* compliance with FCC requirements and one for use *after* compliance.

2.02 In documentation *before* compliance, the FCC requires the following notice:

Warning: This equipment generates, uses, and can radiate radio frequency energy; and if not installed and used in accordance with the instructions manual, may cause interference to radio communications. As temporarily permitted by

regulation, it has not been tested for compliance with the limits for Class A computing devices pursuant to Subpart J of Part 15 of FCC Rules, which are designed to provide reasonable protection against such interference. Operation of this equipment in a residential area is likely to cause interference in which case the user, at his own expense, will be required to take whatever measures may be required to correct the interference.

2.03 In documentation *after* compliance the FCC requires the following notice:

Warning: This equipment generates, uses, and can radiate radio frequency energy; and if not installed and used in accordance with the instructions manual, may cause interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to Subpart J of Part 15 of FCC Rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area is likely to cause interference in which case the user, at his own expense, will be required to correct the interference.
