

D UNDERGROUND WIRE

1. GENERAL

1.01 D Underground Wire is a single-pair wire consisting of two parallel No. 19 AWG annealed copper conductors with a polyethylene compound insulation, galvanized steel armor, and a PVC jacket.

1.02 Its electrical characteristics are the same as those of 19-gauge (.083) exchange cable; therefore the secondary constants, loop loss factors, loading gains, etc, for 19-gauge (.083) cable can be used for D Underground Wire.
