

NETWORK IDENTIFICATION ELECTRONIC TANDEM NETWORK SWITCHED SERVICE NETWORKS

1. GENERAL

1.01 This section lists the network grouping identification (NGID) numbers assigned to the electronic tandem network (ETN).

1.02 This section is reissued to include the new ETN networks. These have been added to Table A and are denoted by the shaded area.

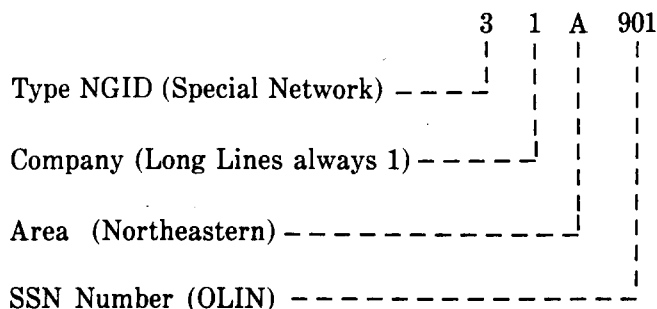

2. IDENTIFICATION NUMBERS

A. Network Numbers

2.01 Three-digit switched service network numbers are reserved for ETN assignment. The numbers 901 through 999 are used for this service. Table A is a numerical list of all ETNs.

B. Network Grouping Identification Numbers

2.02 The NGID codes consist of six alphanumeric characters. The first character is always a 3, which designates a special network. The second character, either alpha or numeric, designates the telephone company. The third character is used to designate an area or region within a company. The last three digits will identify a particular network. An example of an ETN number follows.

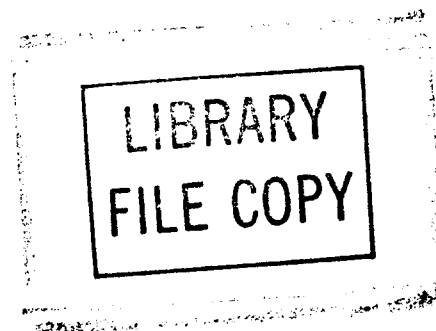

2.03 The NGID numbers are data processing codes used as follows:

- (a) To group all trouble activity for an ETN
- (b) To identify a specific ETN operation's service manager(OSM)
- (c) To complete the header for the Special Service System (SSS) form 6948-1 for input to the Data Processing Center (see Section 660-225-102).

3. NUMBER ASSIGNMENT

3.01 Assignment of NGID numbers is the responsibility of the AT&T Company, Network Switched Service, Special Service, ETN Coordinator, 295 North Maple Avenue, Basking Ridge, New Jersey 07920. All requests for number assignments on new networks or changes on existing networks should be forwarded through your area or operating telephone company (OTC) Switched Service Committee member having operations, plant, or network service responsibility.
