## 1. LATAWATS OVERVIEW

LATAWATS is the acronym for Local Access and Transport Area - Wide Area Telecommunications Services.

The LATAWATS system merges customer specific data from the WATS Information System (WIS) with message data from the Centralized Message Data System (CMDS). This information is used to create 800 and WATS Services Data Bases, which are used as input to the intra-LATA version of the WATS Rate Planning Model (WRPM).

LATAWATS release 3.1 is a deployed version of release 3.0. All system enhancements that were incorporated in version 3.0 are present in release 3.1.

The enhancements incorporated in release 3.0 and 3.1 are listed below.

1. The need for a key field has been eliminated.
2. BOC WIS tapes are now used instead of AT&T WIS tapes.
3. The user now has the option of creating a mileage band file or using the system default.
4. Dummy LATA have been assigned to any WIS customer records that have a blank LATA field.

## 1.1 LATAWATS DATA SET INFORMATION

This section contains data set information for LATAWATS.

### PROGRAM LOAD MODULES

Data Set Name: LWATDSK.DPLYTEST.LOADLIB  
Type: Partitioned  
Members (Load Modules): WL3V3MILE, WL3V3XLAT, WL3V3PARM, WL3V3M101,  
WL3V3M102, WL3V3M201, WL3V3M202, WL3V3M203,  
WL3V3M204, WL3V3M205, WL3V3M206, WL3V3M301,  
WL3V3M302, WL3V3M303, WL3V3M304, WL3V3M305,  
WL3V3M306, WL3V3M401  
Utility: Use an IEBCOPY to load from tape.  
Recommended Space: (6233, (120, 150, 4))  
DCB Information: (DSORG = PO, BLKSIZE = 6233)

### PROCEDURES

Data Set Name: LWATDSK.PROCLIB.CNTL  
Type: Partitioned  
Members (Load Modules): LWAT01, LWAT01P, LWAT02, LWAT02P,  
LWAT03, LWAT03P  
Utility: Use an IEBCOPY to load from tape.  
Recommended Space: (6000, (25, 5, 2))  
DCB Information: (RECFM = FB, LRECL = 80, BLKSIZE = 6000)

**TEST FILES**

Data Set Name: LWATAPE.DPINTRA.WIS0384  
Type: Sequential  
Utility: Use an IEBGENER to load from tape.  
DCB Information: (LRECL = 172, BLKSIZE = 28,896, RECFM = FB)

Data Set Name: LWATAPE.DPTRABDT.CMDS0384  
Type: Sequential  
Utility: Use an IEBGENER to load from tape.  
DCB Information: (LRECL = 134, BLKSIZE = 28,944, RECFM = FB)

Data Set Name: LWATDSK.MAPMILES.DATA  
Type: Sequential  
Utility: Use an IEBGENER to load from tape.  
DCB Information: (LRECL = 80, BLKSIZE = 6,400, RECFM = FB)  
Recommended Space: (6400, (1, 1))

Data Set Name: LWATDSK.XLATAS.DATA  
Type: Sequential  
Utility: Use an IEBGENER to load from tape.  
DCB Information: (LRECL = 80, BLKSIZE = 6,400, RECFM = FB)  
Recommended Space: (6400, (1, 1))

## 1.2 LATAWATS PROCEDURES

There are three (3) procedures to run the LATAWATS system. These procedures contain the suggested Job Control Language (JCL) required to successfully execute all LATAWATS programs.

The three procedures used to run the LATAWATS system are listed below. The procedure name appears in the left-hand column, its function in the right.

LWAT01 - MAPMILES File Edit

LWAT02 - X-LATA File Edit

LWAT03 - CMDS and WIS Merge

### **1.3 VERIFICATION PACKAGE PROCESSING INFORMATION**

The verification package for LATAWATS consists of running the edit procedures for the two (2) support files (the LWAT01 and LWAT02 procs), and the main processing of the CMDS and WIS merge (the LWAT03 proc).

All parameters that are defaulted in procs LWAT01, LWAT02, and LWAT03 should be used when running the verification package.

## 2. MAPMILES FILE EDIT (LWAT01)

The MAPMILES File Edit (LWAT01) procedure will execute the LATAWATS system version 3.1 proc LWAT01P, which is used to edit the Mileage Map File.

This chapter contains the following information about the MAPMILES File Edit (LWAT01) run:

- Scheduling Requirements
- CSS Job Flow
- Job Preprocessing
- Control Language
- Job Processing Information
- Messages and Codes
- Job Restart
- Job Output Control
- Job Media Distribution
- Verification Report.

### NOTE

This is a new release for July 1, 1985 (release 3.1).

## 2.1 SCHEDULING REQUIREMENTS

The following is a list of the scheduling requirements for the MAPMILES File Edit (LWAT01) run.

JOB FREQUENCY: As required
PREREQUISITE JOBS: None
EXTERNAL INPUT REQUIRED: No
INPUT: Not/Applicable
DAY INPUT IS DUE: Not/Applicable
DAY OUTPUT IS DUE: Next business day
INPUT CONTACT: None
COMPUTER: 3033
OPERATING SYSTEM: MVS
ESTIMATED RUN TIME: 1 minute
STORAGE: 256 K
PRINT PAGES: 1
TAPE UNIT REQUIREMENTS: None
DISK UNIT REQUIREMENTS: SYSDA for Input, Output
SPECIAL REQUIREMENTS: None

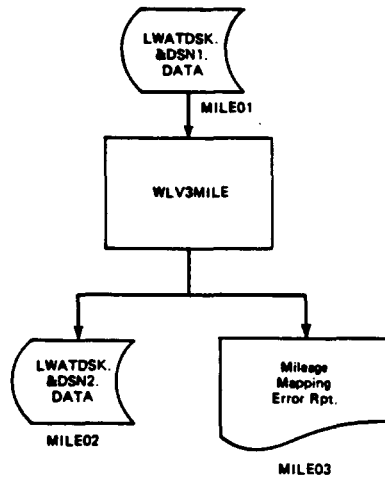

## 2.2 CSS JOB FLOW FOR LWAT01

This section shows the job flow for LWAT01 in step LWAT01S1.

### FLOWCHART

### DESCRIPTION BY PROCESSING STEPS

LWAT01S1

STEP: LWAT01S1

Program WLV3MILE edits the user created MAPMILES file LWATDSK.&DSN1.DATA (MILE01).

If any errors exist in that file, they will be listed on the Mileage Mapping Error Report (MILE03).

If no errors are found in the file, a message to that effect will be printed on the error report, and the MAPOMILE file LWATDSK.&DSN2.DATA (MILE02) will be output.

## 2.3 JOB CONTROL

This section contains the execution and procedure JCL for the MAPMILES File Edit.

### EXECUTION JCL

```
/**          *** EXEC JCL ***                                00001005
/** PROC - LWATO1 (MAPMILES FILE EDIT)                       00002005

## 2.4 JOB PREPROCESSING INSTRUCTIONS

1. Any of the defaults listed in the LWAT01 proc can be overridden by specifying a new value on the EXEC statement.
2. To use a file other than the default input file LWATDSK.MAPMILES.DATA, &DSN1 must be overridden by specifying the name of your input file. (The name of your input file must be different than that of the default input file.)
3. To use a file other than the default output file LWATDSK.MAPOMILE.DATA, &DSN2 must be overridden by specifying a different output file name.

## 2.5 JOB PROCESSING INFORMATION

This section contains job processing information for the MAPMILES File Edit (LWAT01) run.

INPUT: No
COMPUTER: 3033
OPERATING SYSTEM: MVS
ESTIMATED RUN TIME: 1 minute
STORAGE: 256 K
PRINT PAGES: 1
LINES/INCH: 6
FORM ID: Standard
NUMBER OF PARTS: 1
PRINT ALIGNMENT: Standard
TAPE UNIT REQUIREMENTS: None
DISK UNIT REQUIREMENTS: SYSDA for Input and Output

I/O	DEVICE	DSNAME OR DASD NAME	SPECIAL INSTRUCTIONS
I	DISK	&DSN1	(MILE01) user maintained
O	Disk	&DSN2	(MILE02) user maintained
O	Rpt	Mileage Mapping Error Report	MILE03

## 2.6 MESSAGES & CODES

The following messages may appear on the Mileage Mapping Error Report for LWAT01 in step LWAT01S1.

MESSAGE/CODE	ACTION/RESPONSE
Mileage band not numeric	Correct the mileage band field and re-run the job.
Rate steps not consecutive	Correct the rate step fields and re-run the job.
Mileage bands not sequential	Correct the mileage band fields and re-run the job.
More than 19 rate steps entered	Correct the MAPMILES file and re-run the job.
Rate step not a 2 digit number	Correct the rate step field and re-run the job.
Mileage range not a 4 digit number	Correct the mileage band field and re-run the job.
*** No Errors Detected ***	This message is output to inform you that no errors were found in the MAPMILES file; no action or response is required when this message is output.
Return-code = 16	This code will appear any time there is an error in the input file.

## **2.7 JOB RESTART PROCEDURES**

The following restart procedures should be followed in the event this run ends abnormally (abends).

1. If step LWAT01S1 does not have a completion code of 0 (zero), re-run proc LWAT01.
2. If a condition code of 16 is output, follow the procedures outlined in paragraph 4.6, Messages & Codes, for resolving this problem.
3. If the problem can not be located, contact your local LATAWATS programmer.

## 2.8 JOB OUTPUT CONTROL

This section contains job output control information for LWAT01.

REPORT ID	VERIFICATION REQUIREMENTS
LWAT01SI.MILE03 Mileage Mapping Error Report	If there are any errors in the MAP-MILES file, they will be listed on this report. If there are no errors in the file, this report will contain a message to that effect.

## 2.9 JOB MEDIA DISTRIBUTION

This section shows the job media distribution for the Mileage Mapping Error Report.

Report Name	I/O	Media	Paper Preparation		Delivery Information	
			No. Parts	Disp. of Sys. Messages	No. Copies	Client Name/Title
Mileage Mapping Error Rpt.	O	P	1	Local LATAWATS Programmer	1	BOC/LATAWATS Coordinator

## **2.10 VERIFICATION REPORT**

This section contains an example of the Mileage Mapping Error Report produced by this run when the run has executed successfully.

If there are errors in the input parameters for this run, they will be listed on the error report.

## 2.11 MILEAGE MAPPING ERROR REPORT

### **3. X-LATA FILE EDIT (LWAT02)**

The X-LATA File Edit (LWAT02) procedure will execute the LATAWATS system version 3.1 proc LWAT02P, which is used to edit the X-LATA File.

This chapter contains the following information about the X-LATA File Edit (LWAT02) run:

- Scheduling Requirements
- CSS Job Flow
- Job Preprocessing
- Control Language
- Job Processing Information
- Messages and Codes
- Job Restart
- Job Output Control
- Job Media Distribution
- Verification Report.

#### **NOTE**

This is a new release for July 1, 1985 (release 3.1).

### 3.1 SCHEDULING REQUIREMENTS

The following is a list of the scheduling requirements for the X-LATA File Edit (LWAT02) run.

JOB FREQUENCY: As required
PREREQUISITE JOBS: None
EXTERNAL INPUT REQUIRED: No
INPUT: Not/Applicable
DAY INPUT IS DUE: Not/Applicable
DAY OUTPUT IS DUE: Next business day
INPUT CONTACT: None
COMPUTER: 3033
OPERATING SYSTEM: MVS
ESTIMATED RUN TIME: 1 minute
STORAGE: 256 K
PRINT PAGES: 1
TAPE UNIT REQUIREMENTS: None
DISK UNIT REQUIREMENTS: SYSDA for Output
SPECIAL REQUIREMENTS: None

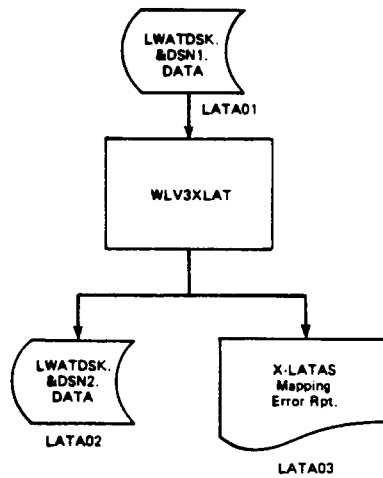

### 3.2 CSS JOB FLOW FOR LWAT02

This section shows the job flow for LWAT02 in step LWAT02S1.

#### FLOWCHART

#### DESCRIPTION BY PROCESSING STEPS

LWAT02S1

#### STEP: LWAT02S1

Program WLV3XLAT edits the user created X-LATA file LWATDSK.&DSN1.DATA (LATA01).

If any errors exist in the file, they will be listed on the X-LATAS Mapping Error Report (LATA03).

If no errors are found, a message to that effect will be printed on the error report, and the XLATA file LWATDSK.&DSN2.DATA (LATA02) will be output. This file will contain valid X-LATA data.

### 3.3 JOB CONTROL

This section contains the execution and procedure JCL for the X-LATA File Edit.

#### EXECUTION JCL

```
/**          *** EXEC JCL ***                                00001005

### **3.4 JOB PREPROCESSING INSTRUCTIONS**

1. Any of the defaults listed in the LWAT02 proc can be overridden by specifying a new value on the EXEC statement.
2. To use a file other than the default input file LWATDSK.XLATAS.DATA, &DSN1 must be overridden by specifying the name of your input file. (The name of your input file must be different than that of the default input file.)
3. To use a file other than the default output file LWATDSK.XLATASO.DATA, &DSN2 must be overridden by specifying a different output file name.

### 3.5 JOB PROCESSING INFORMATION

This section contains job processing information for the X-LATA File Edit (LWAT02) run.

INPUT: No
COMPUTER: 3033
OPERATING SYSTEM: MVS
ESTIMATED RUN TIME: 1 minute
STORAGE: 256 K
PRINT LINES: 0-1,000
LINES/INCH: 6
FORM ID: Standard
NUMBER OF PARTS: 1
PRINT ALIGNMENT: Standard
TAPE UNIT REQUIREMENTS: None
DISK UNIT REQUIREMENTS: SYSDA for Output

I/O	DEVICE	DSNAME OR DASD NAME	SPECIAL INSTRUCTIONS
I	DISK	&DSN1	(LATA01) user maintained
O	Disk	&DSN2	(LATA02) user maintained
O	Rpt	XLATAS Mapping Error Report	LATA03

### 3.6 MESSAGES & CODES

The following messages may appear on the X-LATA File Edit Error Report for LWAT02 in step LWAT02S1.

MESSAGE/CODE	ACTION/RESPONSE
*** No Errors Detected ***	This message is output to inform you that no errors were found in the input file; no action or response is required when this message is output.
Return-code = 16	This code will appear any time there is an error in the input file. If you receive this code, refer to the error report, then correct the data and re-run the job.

### **3.7 JOB RESTART PROCEDURES**

The following restart procedures should be followed in the event this run ends abnormally (abends).

1. If step LWAT02S1 does not have a completion code of 0 (zero), re-run proc LWAT02.
2. If a condition code of 16 is output, follow the procedures outlined in paragraph 5.6, Messages & Codes, for resolving this problem.
3. If the problem can not be located, contact your local LATAWATS programmer.

### 3.8 JOB OUTPUT CONTROL

This section contains job output control information for LWAT02.

REPORT ID	VERIFICATION REQUIREMENTS
LWAT02SI.LATA03 X-LATAS Mapping Error Report	If there are any errors in the input file, they will be listed on this report. If there are no errors in the file, this report will contain a message to that effect.

### 3.9 JOB MEDIA DISTRIBUTION

This section shows the job media distribution for the X-LATA File Edit Error Report.

Report Name	I/O	Media	Paper Preparation		Delivery Information	
			No. Parts	Disp. of Sys. Messages	No. Copies	Client Name/Title
X-LATAS Mapping Error Rpt.	O	P	1	Local LATAWATS Programmer	1	BOC/LATAWATS Coordinator

### **3.10 VERIFICATION REPORT**

This section contains an example of the XLATAS Mapping Error Report produced by this run when the run has executed successfully.

If there are errors in the input parameters for this run, they will be listed on the error report.

#### **4. CMDS & WIS MERGE (LWAT03)**

The CMDS & WIS Merge (LWAT03) procedure will execute the LATAWATS system version 3.1 proc LWAT03P. This procedure merges CMDS and WIS data and produces an inward and outward WRPM Model File.

This chapter contains the following information about the CMDS & WIS Merge (LWAT03):

- Scheduling Requirements
- CSS Job Flow
- Job Preprocessing
- Control Language
- Job Processing Information
- Messages and Codes
- Job Restart
- Job Output Control
- Job Media Distribution
- Verification Reports.

**NOTE**

This is a new release for July 1, 1985 (release 3.1).

#### 4.1 SCHEDULING REQUIREMENTS

The following is a list of the scheduling requirements the CMDS & WIS Merge (LWAT03) run.

JOB FREQUENCY: As required
PREREQUISITE JOBS: LWAT01 and LWAT02
EXTERNAL INPUT REQUIRED: Yes
INPUT: CMDS & WIS data
DAY INPUT IS DUE: Not/Applicable
DAY OUTPUT IS DUE: Next business day
INPUT CONTACT: See SPECIAL REQUIREMENTS.
COMPUTER: 3033
OPERATING SYSTEM: MVS
ESTIMATED RUN TIME: Varies for each location.
STORAGE: 1024 K
PRINT LINES: Varies for each location.
TAPE UNIT REQUIREMENTS: A maximum of three (3) tapes per job step.
DISK UNIT REQUIREMENTS: SYSDA for SORT, Input, and Output (Amount depends on the size of the state.)
SPECIAL REQUIREMENTS: Input contacts (see below). <ul style="list-style-type: none"><li>• Contact your local WIS coordinator for the WIS data tape for this run.</li><li>• Contact your local CMDS coordinator for CMDS data type for this run.</li></ul>

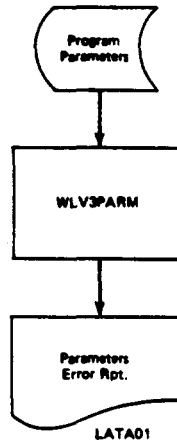

## 4.2 CSS JOB FLOW FOR LWAT03

This section shows the job flow for LWAT03 in steps LWAT3S01 through LWAT3S19.

### FLOWCHART

### DESCRIPTION BY PROCESSING STEPS

LWAT3S01

#### STEP: LWAT3S01

Input for this step consists of the user-defined and system default parameters used in the run.

Program WLV3PARAM verifies all user entered and default parameters used in the run. This program insures that the run will not abort in a later step because of an invalid parameter.

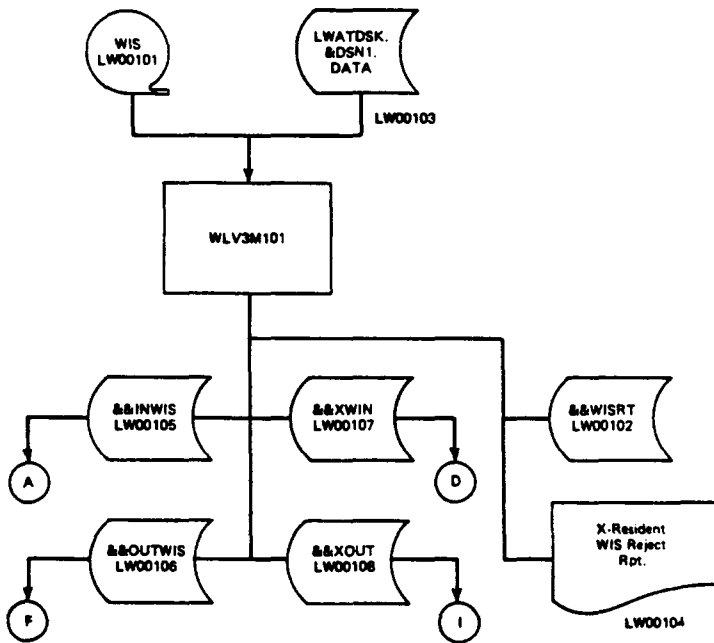

If any errors exist, they will be listed on the Parameters Error Report (LATA01). If no errors are found, a message to that effect will be printed on the error report.

FLOWCHART

DESCRIPTION BY  
PROCESSING STEPS

**LWAT3S02**

**STEP: LWAT3S02**

The WIS data (LW00101) and the XLATA data (LW00103) are the input for this step.

Program WLV3M101 splits the WIS data into Inward and Outward components, and produces the X-Resident WIS Reject Report (LW00104).

The following files may be output in this step (depending on whether any WIS records are rejected):

**Inward WIS Data (LW00105)**

Passed to step LWAT3S04 and used as input.

**Outward WIS Data (LW00106)**

Passed to step LWAT3S10 and used as input.

**Inward WIS X-Reject Totals (LW00107)**

Passed to steps LWAT3S07 & LWAT3S09, and used as input.

**Outward WIS X-Reject Totals (LW00108)**

Passed to steps LWAT3S13 & LWAT3S15, and used as input.

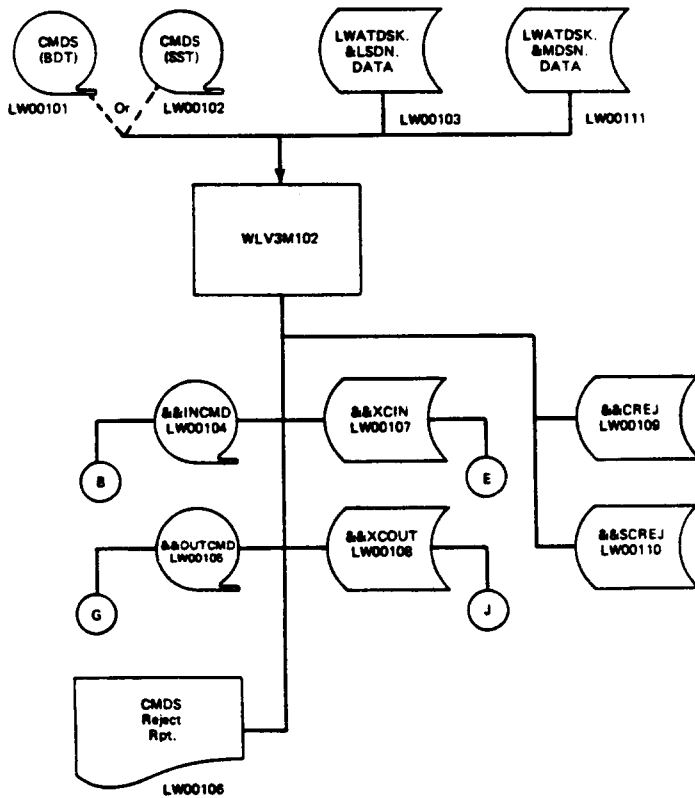

**Sorted WIS (LW00102)**

This is a temporary sort file.

FLOWCHART

DESCRIPTION BY  
PROCESSING STEPS

**LWAT3S03**

**STEP: LWAT3S03**

The CMDS data (LW00101) or (LW00102) and the XLATA data (LW00103) are the input for this step. (The CMDS tape can be type "BDT" or "SST".)

Program WLV3M102 splits the CMDS data into Inward and Outward components, and produces the CMDS Reject Report (LW00106).

The following files may be output in this step (depending on whether any CMDS records are rejected):

**Inward CMDS Data (LW00104)**

Passed to step LWAT3S04, and used as input.

**Outward CMDS Data (LW00105)**

Passed to step LWAT3S10, and used as input.

**Inward CMDS Reject Totals (LW00107)**

Passed to steps LWAT3S07 & LWAT3S09, and used as input in those steps.

**Outward CMDS Reject Totals (LW00108)**

Passed to steps LWAT3S13 & LWAT3S15, and used as input in those steps.

**Sorted CMDS (LW00109)**

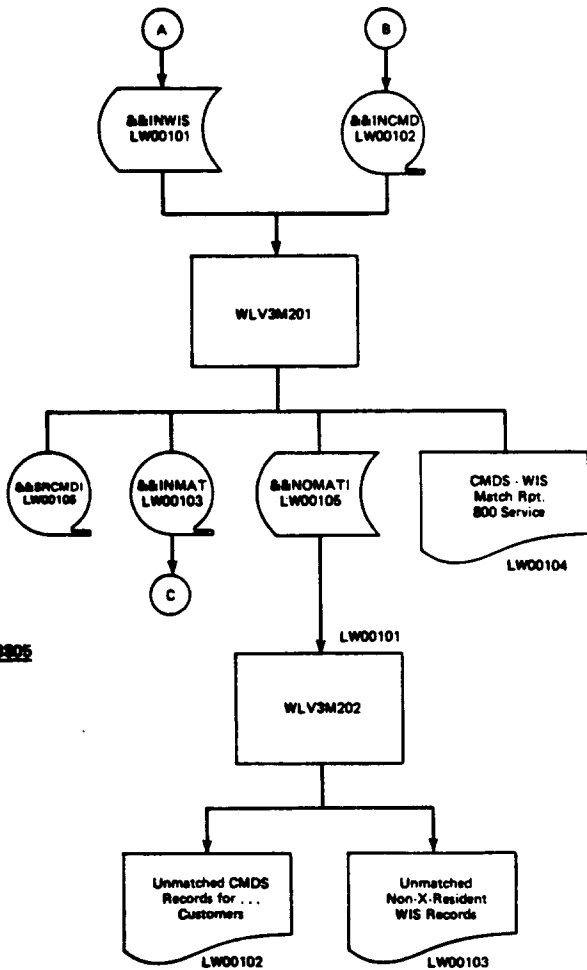

**Sorted CMDS (LW00110)**

These are temporary sort files.

FLOWCHART

DESCRIPTION BY  
PROCESSING STEPS

**LWAT3S04**

**LWAT3S05**

**STEP: LWAT3S04**

The Inward CMDS data (LW00101) and the Inward WIS data (LW00102) are the input for this step.

Program WLV3M201 performs a line-by-line merge of the Inward CMDS and WIS data and produces a merged CMDS and WIS file, and the CMDS-WIS Match Report of 800 Service (LW00104).

The following files may be output in this step (depending on whether there are any unmatched CMDS and WIS records).

**Inward Combined (LW00103)**  
Passed to steps LWAT3S06 and LWAT3S08, and used as input in those steps.

**Inward Unmatch (LW00105)**  
This file is used as input in step LWAT3S05.

**Sorted Inward CMDS (LW00106)**  
This is a temporary sort file.

**STEP: LWAT3S05**

The Inward Unmatched file (LW00101) is the only input to this step.

Program WLV3M202 produces the following reports: the Unmatched CMDS Records for Bell Regular Customers and Independent Customers for 800 Service (LW00102), and the Unmatched Non-X-Resident WIS Records (LW00103)

FLOWCHART

DESCRIPTION BY  
PROCESSING STEPS

**LWAT3S06**

**STEP: LWAT3S06**

The Inward Combined File (LW00101) is the only input for this step.

Program WLV3M203 compresses the Inward Combined File for each Customer/USOC combination by RAO. This step also produces the RAO-Based, Customer Compression Report for 800 Service (LW00104) is also produced.

The following files are output in this step.

**Inward Compressed File (LW00102)**

Passed to step LWAT3S16, and used as input.

**Inward RAO Customer File (LW00103)**

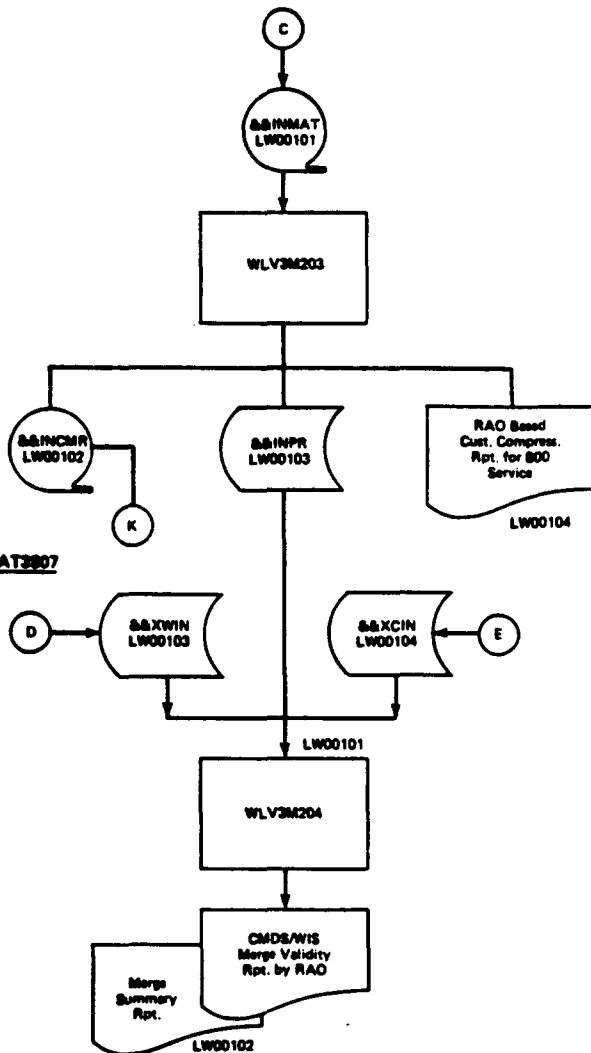

This file is used as input in step LWAT3S07.

**LWAT3S07**

**STEP: LWAT3S07**

The Inward RAO Customer File (LW00101), Inward WIS Reject Totals (LW00103), and Inward CMDS Reject Totals (LW00104) are input to this step.

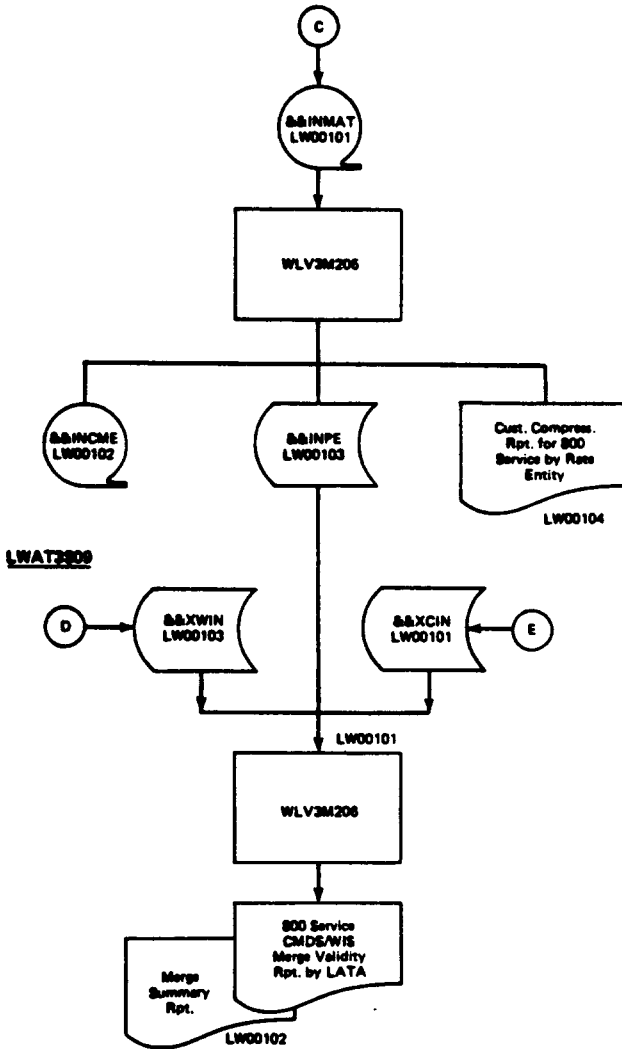

Program WLV3M204 uses the input files listed above to produce the 800 Service CMDS/WIS Merge Validity Report by RAO and Merge Summary Report (LW00102).

FLOWCHART

DESCRIPTION BY  
PROCESSING STEPS

LWAT3S08

LWAT3S09

**STEP: LWAT3S08**

The Inward Combined File (LW00101) is the only input for this step.

Program WLV3M205 compresses the Inward Combined File for each Customer/USOC combination by Rate Entity (LATA and sub-zone). This step also produces the Rate Entity Based, Customer Compression Report for 800 Service. (LW00104).

The following files are output in this step.

**Inward Compressed File (LW00102)**  
This is a temporary file.

**Inward Rate Entity Customer File (LW00103)**  
This file is used as input in step LWAT3S09.

**STEP: LWAT3S09**

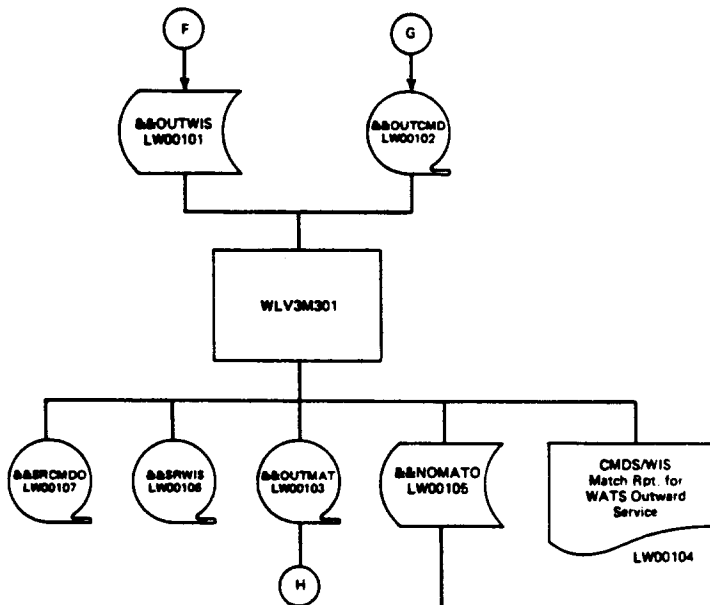

The Inward Rate Entity Customer File (LW00101), Inward WIS Reject Totals (LW00103), and Inward CMDS Reject Totals (LW00104) are input to this step.

Program WLV3M206 uses the input files listed above to produce the 800 Service CMDS/WIS Merge LATA-Based Validity Report and Merge Summary Report (LW00102).

FLOWCHART

DESCRIPTION BY  
PROCESSING STEPS

**LWAT3S10**

**LWAT3S11**

**STEP: LWAT3S10**

The Outward WIS File (LW00101) and Outward CMDS File (LW00102) are input to this step.

Program WLV3M301 merges the Outward WIS File with the Outward CMDS File to produce a merged WIS and CMDS File and an Outward Unmatched File. The CMDS-WIS Match Report for WATS Outward Service (LW00104) is also produced.

The following is a list of the files output in this step.

**Outward Combined (LW00103)**

Passed to steps LWAT3S12 and LWAT3S14, and used as input in those steps.

**Outward Unmatch (LW00105)**

Used as input in step LWAT3S11.

**Sorted WIS (LW00106)**

**Sorted CMDS (LW00107)**

These are temporary sort files.

**STEP: LWAT3S11**

The Outward Unmatched File (LW00101) is input to this step.

Program WLV3M302 creates the following reports: the WATS Outward, Unmatched CMDS Record for Bell Regular Customers and Independent Customers (LW00102), and the WATS Outward, Unmatched Non-X-Resident WIS Records by RAO (LW00103).

FLOWCHART

DESCRIPTION BY  
PROCESSING STEPS

**LWAT3S12**

**STEP: LWAT3S12**

The Outward Combined File (LW00101) is the only input for this step.

Program WLV3M303 compresses the Outward Combined File for each Customer/USOC combination by RAO. The WATS Outward Customer Compression Report by RAO (LW00104) is also produced.

The following files are output in this step.

**Outward Compressed File (LW00102)**

Passed to step LWAT3S17, and used as input.

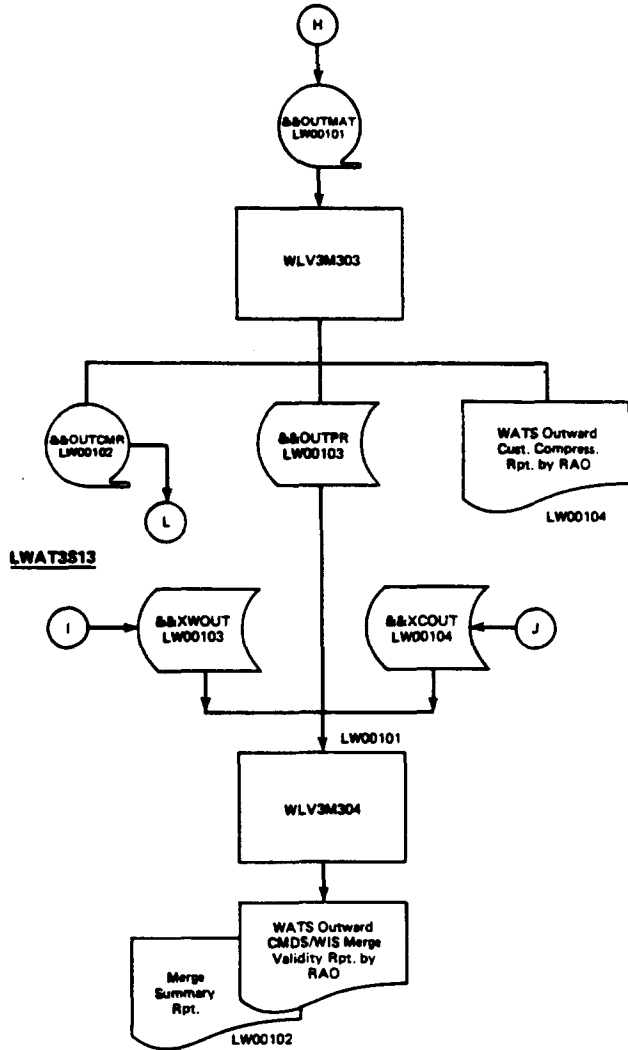

**Outward RAO Customer File (LW00103)**

This file is used as input in step LWAT3S13.

**STEP: LWAT3S13**

The Outward RAO Customer File (LW00101), Outward WIS Reject Totals (LW00103), and Outward CMDS Reject Totals (LW00104) are input to this step.

Program WLV3M304 uses the input files listed above to produce the WATS Outward CMDS/WIS Merge Validity Report by RAO and Merge Summary Report (LW00102).

FLOWCHART

DESCRIPTION BY  
PROCESSING STEPS

**LWAT3S14**

**STEP: LWAT3S14**

The Outward Combined File (LW00101) is the only input for this step.

Program WLV3M305 compresses the Outward Combined File for each Customer/USOC combination by Rate Entity (LATA and sub-zone). The Rate Entity Based, WATS Outward Customer Compression Report (LW00104) is also produced.

The following files are output in this step.

**Outward Compressed File (LW00102)**  
This is a temporary file.

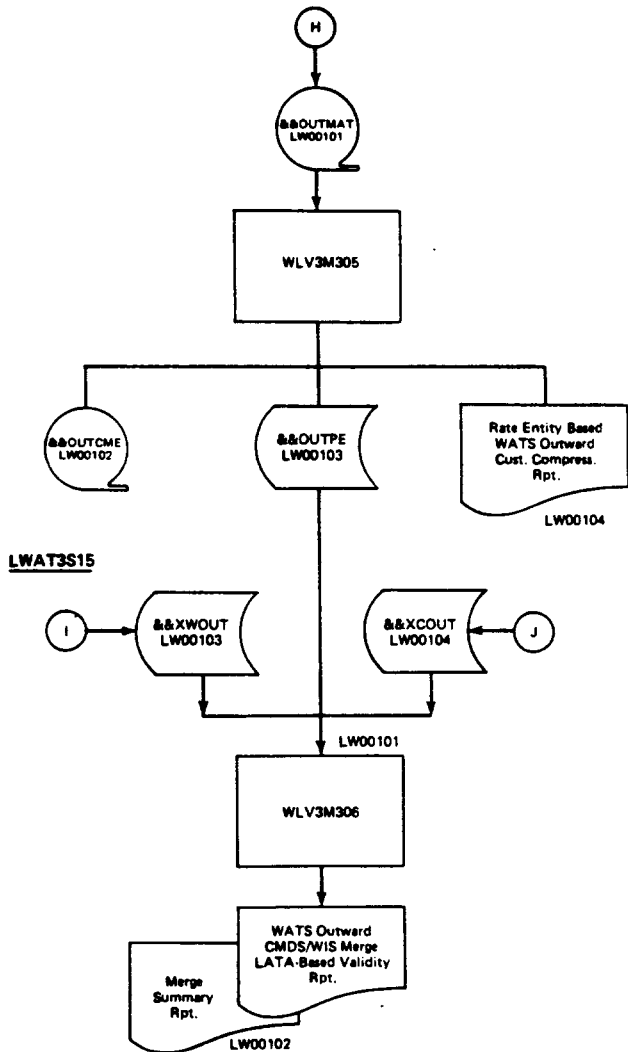

**Outward Rate Entity Customer File (LW00103)**

This file is used as input in step LWAT3S15.

**STEP: LWAT3S15**

The Outward Rate Entity Customer File (LW00103), Outward WIS Reject Totals (LW00103), and Outward CMDS Reject Totals (LW00104) are input to this step.

Program WLV3M206 uses the input files listed above to produce the WATS Outward CMDS/WIS Merge LATA-Based Validity Report and Merge Summary Report (LW00102).

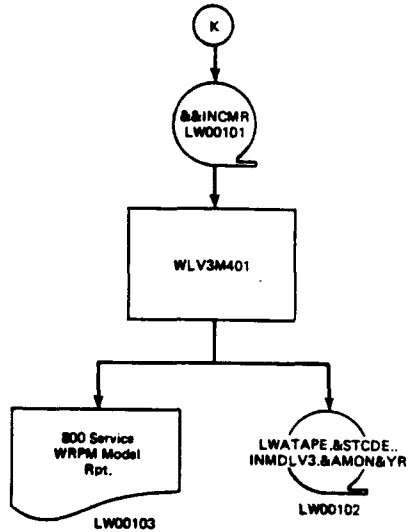

FLOWCHART

DESCRIPTION BY  
PROCESSING STEPS

LWAT3S16

**STEP: LWAT3S16**

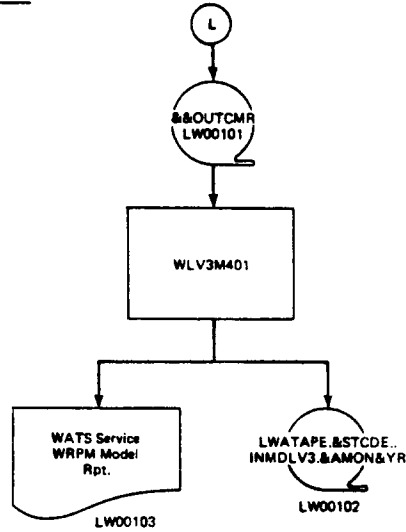

Program WLV3M401 takes the Inward Compressed File and reformats it into the Inward WRPM Model File (LW00102).

This step also creates the 800 Service WRPM Model Report (LW00103).

FLOWCHART

DESCRIPTION BY  
PROCESSING STEPS

LWAT3S17

**STEP: LWAT3S17**

Program WLV3M401 takes the Outward Compressed File and reformats it into the Outward WRPM Model File (LW00102).

This step also creates the WATS Service WRPM Model Report (LW00103).

### 4.3 JOB CONTROL

This section contains the execution and procedure JCL for the CMDS & WIS Merge.

#### EXECUTION JCL

```

/**          *** EXEC JCL ***                                00001000

#### 4.4 JOB PREPROCESSING INSTRUCTIONS

1. Any of the defaults listed in the LWAT03 proc can be overridden by specifying a new value on the EXEC statement.
2. Proc LWAT01 and LWAT02 must be run prior to running LWAT03.

Proc LWAT01 (MAPMILES Edit) creates an edited, output mapmiles file with a default name of LWATDSK.MAPOMILE.DATA. If the default name was overridden in proc LWAT01, it must also be overridden in proc LWAT03. (The name used in LWAT03, must be the same as the one used in LWAT01.)

Proc LWAT02 (X-LATA Edit) creates an edited, output XLATAS File with a default name of LWATDSK.XLATASO.DATA. If the default name was overridden in proc LWAT02, it must also be overridden in proc LWAT03. (The name used in LWAT03, must be the same as the one used in LWAT02.)

3. The parameters listed below should be checked for their validity before executing this proc.

**&AMON** This parameter is used to specify the month for which data is being processed.

Valid values for this parameter are JAN, FEB, MAR, APR, MAY, JUN, JUL, AUG, SEP, OCT, NOV, and DEC.

**&YR** This parameter is used to identify the year for which data is being processed.  
Enter the last two digits of the year for which data is being processed for this parameter.

The default value for this parameter is 1985 ("85").

**&SERVOFF** This parameter identifies the Serving Office that will be used to determine the LATA for the run.

Valid values for this parameter are "L", for the Local Serving Office, and "F", for a Foreign Serving Office. The default value for this parameter is "L".

**&TZONE** This parameter identifies the Time Zone.

Valid values for this parameter are "0" (for Eastern Time), "1" (for Control Time), "2" (for Mountain Time), and "3" (for Pacific Time). The default value is "0".

**&CMDSTYP** This parameter identifies the CMDS tape type.

Valid tape types are "BDT" (for Basic Data Tapes) and "SST" (for Sub-Sample Tapes). The default value is "BDT".

- &CUSGRP** This parameter identifies the telephone number for customer grouping.  
Valid values for this parameter are "BTN" (for Billing Telephone Number) and "ATN" (for Account Telephone Number). The default value is "BTN".
- &MRGTYP** This parameter identifies the number of merge digits.  
Valid values for this parameter are "07" and "10". The default value is "07".
- &TITLE** This parameter identifies the state name used on the reports produced by this run.  
Any 15 character state identity code can be entered for this parameter. The default value for this parameter is "XXXXXXXXXXXXXXXXXX".
- &RPTTYP** This parameter identifies the type of report(s) to be produced.  
Valid values for this parameter are "L" (for LATA), "R" (for RAO), and "B" (for both report types). The default value is "B".

4. Two types of tapes can be run through LATAWATS: Basic Data Tapes (BDT) and Sub-Sample Tapes (SST).

If you are using SST, step LWAT3S03 should appear as follows:

```
//LW00101 DD DSN=LWATAPE.&STCDE.TRA&CMDSTYP..CMDS&TPEDTE,  
//      DISP=SHR  
//LW00102 DD DUMMY
```

If you are using BDT, step LWAT3S03 should appear as follows:

```
//LW00101 DD DUMMY  
//LW00102 DD DSN=LWATAPE.&STCDE.TRA&CMDSTYP..CMDS&TPEDTE,  
//      DISP=SHR
```

5. The parameter &RPTTYP determines the type of reports produced.

If a value of "B" is specified, all job steps will be run.

If "R" is specified, the reports normally generated in steps LWAT3S08, LWAT3S09, LWAT3S14, and LWAT3S15 will NOT be produced.

If "L" is specified, the reports normally generated in steps LWAT3S06, LWAT3S07, LWAT3S12, and LWAT3S13 will NOT be produced.

#### 4.5 JOB PROCESSING INFORMATION

This section contains job processing information for the CMDS and WIS Merge (LWAT03).

INPUT: Yes, foreign tapes.
COMPUTER: 3033
OPERATING SYSTEM: MVS
ESTIMATED RUN TIME: Varies according to location.
STORAGE: 1024 K
PRINT LINES: Varies for each location.
LINES/INCH: 6
FORM ID: Standard
NUMBER OF PARTS: 1
PRINT ALIGNMENT: Standard
TAPE UNIT REQUIREMENTS: A maximum of 3 tapes per job step.
DISK UNIT REQUIREMENTS: SYSDA for SORT, Input, and Output (Amount depends on the size of the state.)

Pages 4-28 through 4-32 contain tables that show the input and output devices used by LWAT03. Each table contains the following information:

- the step in which the devices is input or output
- whether the device is used as input or output, or both
- the input or output device (i.e., Disk, Tape, or Report)
- the DSNAME, DASD or Report Name of the device
- special instructions about the device.

#### 4.6 MESSAGES & CODES

The following messages may appear on the Parameters Error Report for LWAT03 in step LWAT3S01.

MESSAGE/CODE	ACTION/RESPONSE
Return-code = 16	This code will appear any time there is an error.
The month you have entered is not a valid month	Enter a valid month for the &AMON parameter, and re-run the job.
The year entered must be 84 or greater	Enter a valid year for the &YR parameter, and re-run the job.
The year entered is not numeric	Enter a valid year for the &YR parameter, and re-run the job.
The Serving Office entered was not L (LSO) or F (FSO)	Enter a valid Serving Office code for the &SERVOFF parameter, and re-run the job.
Valid Time Zones are 0, 1, 2, or 3	Enter a valid time zone code for the &TZONE parameter, and re-run the job.
The type of tape entered was not SST or BDT	Enter a valid tape type for the &CMDSTYP parameter, and re-run the job.
The compression number entered is not ATN or BDT	Enter a valid code for the &CUSGRP parameter, and re-run the job.
The merge number entered was not 07 or 10	Enter a valid merge type for the &MRGTYP parameter, and re-run the job.
Your report title was not 15 characters	Enter a valid report title for the &TITLE parameter, and re-run the job.
Your report choice was not L (LATA), R (RAO), or B (Both)	Enter a valid report type for the &RPTTYP parameter, and re-run the job.

The following error messages may be output in step LWAT3S03.

MESSAGE/CODE	ACTION/RESPONSE
**** Error: Number of 800 Service Records Output does not match projected number to be output - Data as created is invalid ****	This message is used to indicate a CMDS Data Error. Check to see if the CMDS tape type (&CMDSTYP) entered is valid.
**** Error: Number of WATS Outward Records Output does not match projected number to be output - Data as created is invalid ****	This message is used to indicate a CMDS Data Error. Check to see if the CMDS tape type (&CMDSTYP) entered is valid.

#### **4.7 JOB RESTART PROCEDURES**

The following restart procedures should be followed in the event this run ends abnormally (abends).

1. If step LWAT03S1 does not have a completion code of 0 (zero), follow the procedures outlined in the Messages & Codes section for this run.
2. If any other steps fail, correct the problem and re-run proc LWAT03.
3. If the problem can not be located, contact your local LATAWATS programmer.

#### 4.8 JOB OUTPUT CONTROL

This section contains job output control information for LWAT03.
