

TELEPHONE SETS — 304A,C, 5304C
COMMON BATTERY — CONNECTIONS

1.00 INTRODUCTION

1.01 This section covers connections for 304A and C, and 5304C telephone sets.

1.02 These sets are used for the following services :

- Individual lines.
- 2-party flat rate.
- 2-party message rate.
- 2-party automatic ticketing.
- 2-party automatic message accounting and zone registration.
- 4-party semiselective.
- Multiparty divided code.
- Multiparty nonselective.

 (Message Rate or Tip Party Identification)

3.00 FILTER CONNECTIONS

When a radio-frequency suppression filter is used in the 304C or 5304C telephone set, make connections as shown in Fig. 8.

4.00 RINGER

4.01 Bias spring of B2AL ringer is normally placed in high notch. However, bias spring may be moved to notch which gives the most satisfactory ring. ↵

4.02 The ringing bridge in this set is high-impedance type. For information on number and type of ringing bridges permitted on each line, see the C Section covering ringer bridge limitations.

5.00 G-TYPE HANDSET

When a G-type handset is used with the 5304C telephone set, the red and one white conductor of the handset cord should be terminated on terminal R of the induction coil and the remaining conductors to their respective terminals.

Note: Remove brown-yellow lead from Y of dial and terminate on filter bracket terminal.
